

Unit 3 Pythagorean Relationship
3.4 – Using the Pythagorean Relationship

The Pythagorean relationship can be used to determine the length of the hypotenuse of a right triangle when the lengths of the two legs are known:

$$a^2 + b^2 = c^2$$

BEDMAS

$$3^2 + 4^2 = c^2$$

$$9 + 16 = c^2$$

$$25 = c^2$$

$$5 = c$$

The Pythagorean relationship can be used to determine the leg length of a right triangle when the lengths of the hypotenuse and the other leg are known:

$$a^2 + b^2 = c^2$$

$$p^2 + 12^2 = 15^2$$

$$p^2 + 144 = 225$$

$$\begin{array}{r} -144 \\ \hline p^2 = 81 \end{array}$$

$$p = 9$$

The right triangle below has a square attached to its hypotenuse. What is the perimeter of the triangle? Give you answer to the nearest tenth of a centimetre

$A = l \times w$
 $A = S^2$
 $\sqrt{914} = S$
 $30.23 = S$

$a^2 + b^2 = c^2$
 $a^2 + 17^2 = 30.23^2$
 $a^2 + 289 = 914$
 $\begin{array}{r} -289 \\ \hline a^2 = 625 \end{array}$
 $a = 25 \text{ cm}$

$P = S_1 + S_2 + S_3$
 $= 30.23 + 25 + 17$
 $= 72.23 \text{ cm}$
